Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-6, 8-12 and 14-18 are rejected under 35 U.S.C. 102(e) as being anticipated by Rick et al. (US 2005/0078774).

1. Regarding claims 1-5, 8-12 and 14-17, Rick discloses a method of frequency adjustment comprising detecting a deviation of frequency of a first signal having a short cycle time (para. 12), detecting a second signal having a longer cycle time (para. 12), and determining a frequency deviation of the received signal on the basis of the deviation of the first and second signal (para. 12), and adjusting the frequency of the received signal (para. 12). Further regarding claims 8-12 and 14-17, the method is implemented by a frequency adjustment device that has detecting/computing sections, a memories, delay circuits and judging sections (fig. 1; fig. 3).
2. Regarding claims 6 and 18, the frequency of the transmitted signal is adjusted (fig. 1; note: the adjustment made by the LO controls the frequency of the transmitter).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 2616

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 7 and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rick et al. (US 2005/0078774) in view of Applicant's admitted prior art.

3. Regarding claims 7 and 13, Rick does not disclose applying the frequency adjusting technique to OFDM. Applicant's admitted prior art discloses OFDM (specification, page 2). Therefore, it would have been obvious to one skilled in the art at the time the invention was made to apply the frequency adjusting technique of Rick to OFDM because one skilled in the art would realize the predictable result of controlling the frequency drift of a signal (see *KSR Int'l Co v. Teleflex, Inc.*, 2007).
